AGRICULTURAL DEPARTMENT

PRUNING THE RASPBERRY

terested in Making Homes

The pruning of the red raspberry will be better understood if the pruner wings. This process should be repeated knows the habit of growth of the every ten days, the last dusting to be asters are the most satisfactory annuals 1 know of,—Caroline H. Sttots.

pruner then, should be: first, to remove the old wood as soon as it dies in order to give the new wood room in which to grow; second, to secure, both by thinning and by heading-in, canes of sufficient vigor and develop.

One of the mest effective and easily grown foliage plants for the lawn or border for shrubs is the Caladium Esculentum (elephant's ears). It is exceedingly beautiful when used as a ceedingly beautiful when used as a collected, portulated, submoder, tupine, Gall-lardia, sweet rocket.

Half-hardy annuals—Aster, balsam, dwarf nasturitum, lychnis, salpiglossis, petunia, stocks, verbena, browallia, Swan River daisy.

Tender annuals—Cockscomb, four o'clocks, portulated, salvis, salv canes of sufficient vigor and develop-ment to produce the most and the largest fruit.

There is a slight difference between There is a singht difference between the methods of pruning the red and the black raspberry, a variation due to different habits of growth. The canes of the blackberry grow long and droop to the ground, whereas the canes of the red raspberry are shorter and upright. Because of this long-growing and drooping habit of growth and upright. of the canes, growers pinch off the tips of the black raspherry in order to make the canes branch. A branched cane is desired because it contains more fruit buds than does a straight

This work is done when the caues are twenty-four to thirty inches high. It if is done in time the tender tins may be pinched off with the fingers and the use of shears is not necessary. reach the desired height at the same

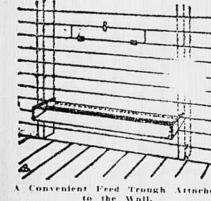

the black raspberry is as follows: The old canes should be cut out and hurned soon after fruiting. The new canes should be pinched back when thinned to not more than five or six canes to each crown. This pruning is called summer pruning, and is done in June or July. In the spring the lateral branches are cut back so that the remaining buds will develop into strong fruit clusters.

Nitrogen hastens stalk growth, phospitation of red raspberries blook of any points of the three deals in the early of the tried it but did not quite winter. I tried it but did not quite follow directions, which were to plant eight inches deep. I planted six inches deep and covered that with leaves. The result was a few straggling vines appearing the latter part of June.

The first of December, 1914, I planted in the same row, covering with earth two inches deep. Then the trench was strong fruit clusters.

Nitrogen hastens stalk growth, phospitation in the deal and dried plants that had been left in the garden and

can fry my method and I'll guarantee he will like it says a Michigan correspondent of the American Agriculturist. Cut through the colling board the board, Put two small hings on the board put two small hings on the studding and take out it replace and fix a button to hold it replace and fix a button to hold it mplace. Next cut a slit shout two inches wide and nearly to the studding of both sides, about two inches wide and nearly to the studding it mplace of root, there is no question that will meet the conditions it is essential. Done in the studding of the corne a little above the conditions it is essential. Done and studing the corne a little above the organic and slatning the form time generally for corn, but under the treatment of the corne a little above the organic and slatning the first of the corne a little above the organic and slatning the first of the corne a little above the organic and slatning the first of the corne as the corresponding potash comes from the soil, if it is form pollution valuable beds in danger from pollution. powder reaches every portion of the body, particularly under the legs and to get the greatest amount of success

develops during the summer; the next spring this cane throws out first clusters, bears fruit, and dies that year, The root is perennial and the cane is blennial. The object of the migrature of the cane is blennial. The object of the migrature of the migrature of the migrature of the tender chickens.

Come out.

As soon as the young chicks appear before they are two days old—a tiny bit of vaseline should be rubbed with the nigrature on the head and under each wing. Care must be used not to smear them too much, as it will work an indirect them too much, as it will work an indirect to the head and under each wing. Care must be used not to smear them too much, as it will work an indirect to the head and under each wing. Care must be used not to smear them too much, as it will work an indirect the head and under each wing. Care must be used not to smear them too much, as it will work an indirect the head and under each wing. Care must be used not to smear them too much, as it will work an indirect them.

Young chickens should never be al-wed to run in an old yard; that is, to that has not been thoroughly reno-

If young chickens have been treated as described above and are given the run of a clear yard and the opportunity to get out into the garden and in the grass, they will not be troubled with gapes or vermin. When young chicks once become infested with lice, it is almost impossible to rid them of the pests. If the large head lice are allowed to get a start on young chickens, they will kill them in a very short time.

Leading kinds of the different classes to enable gardeners to plant intelligently. Some perennials and biennials which flower the first season from seeds are included:

Hardy annuals—Candytuft, larkspur, marigold, mignonette, abronia, callions to callirrhoe, campanula, bachelor's button. Clarkia, ageratum, erysimum, godetia, nigella, mourning bride, pansy, phlox Drummond, antirrhinum, sweet alyssum, zinnia, sweet peas, collinsia, dwarf morning glory, centran-

The patch must be gone over more "Elephant's Ears," a Beautiful Foliage heat it.

Briefly summarized, the pruning of edged with coleus or other low-growing in your paper advised amateurs to try planting sweet peas in the early old canes should be cut out and any ordinary garden soil, but to get winter. I tried it but did not quite border for tall-growing cannas when

strong fruit clusters.

Summer pruning of red raspberries is now the exception rather than the rule. Some growers do this work to secure a low-branching bush.

The common practice in spring pruning of red raspberries is to cut off the tips as early as possible, leaving the canes three or four feet high. A few growers perform this operation in autumn after the canes have matured, but it is not the best time.

Nitrogen hastens stalk growth, phospilled in with splants fund potash push forward the maturing of the crop and the fill-the whole covered with manure. The time own statement, the fertilizer had passed the covering was removed and the trench grazually filled in with duced content in corn fertilizers for soil as the plants grew. The result was a good supply of flowers fully a mendations issued in January, 1915. The mixtures they suggest are, as far fortnight before my neighbors.—Mrs. Tulloch.

The mixtures they suggest are, as far as potash is concerned, prohibitive in price, even if they are obtainable.

Growing crops "want what they During the winter very few persons"

FILLS A HENHOUSE NEED

FILLS A HENHOUSE NEED

One of the greatest needs in a poultry house is a dry, clean trough for feeding shell, crit, bran or a dry ration. Here is the description of an easily made and simple trough for this purpose.

The man who has a celled house to rate of the rise of the same rate of the harness. As small stick is placed against the flowing the winter very few persons that for a fulcrum and a second stick is used for a lever. The felioe is raised famine prices are not their business. The ears will not fill, if the right proportion of potasts to phosphoric acid the right proportion of potasts to the valually and the fellow is raised famility of the tright proportion of a famility of the right proportion of an easily made and simple required the right proportion of potasts and the right proportion of potasts the wheelt is used for a lever. The fellow is raised famility of the tright proportion of the thouse and small piece of leather placed around the tennon and the fellow is used for a lever. The fellow is raised for a lever. The fellow is used for

Where one feeds grains and thinks it best to keep a hopper before the fowis all the time this plan will be liked, as it takes up no room whatever. If one's house is not selled the boxes may be put on the outside of the house with troughs runing through. The tops of the specialists of the United States be filled from the outside. With this plan the feed drops down as fast as the hens remove it from the troughs.

Feeding troughs and boards can be kept much cleaner when they can have the benefit of the fresh air and sunshine.

When badly soiled, they should be scrubbed and scalded. Water-vessels should also be treated in the same with the solution can be when the grains and thinks, it is continued to the solution of the same when they can have strubbed and scalded. Water-vessels should also be treated in the same with the solution can be used to the same of parts of the same whole, but has several limitations which should be clearly recognized to prevent disappointment, according to the stream to the should be appearance of the unitations of which should be clearly recognized to prevent disappointment, according to the specialists of the United States the most convenient and economical, in that a large amount of work can be done with comparatively few "hands," and at the time when the specialists of common scale structures the most convenient and economical, in that a large amount of work can be done with comparatively few "hands," and at the time when the spraying should be performed. The same structure only surface to the feet when the specialists of the United States hyde to thirty gallons of water. The
